

ICS Console

Introduction

ICS console is a modular system used for audio/data communication with radio and telephony lines. It also can be used for wired/wireless lines remote control on any radio/ wired system which are connected to the ICS switch. Using the operative consoles make any located communication system utilization possible (any operator should access to all necessary equipment and could make connection with radio/phone lines locally/remotely). It is usable for establishing any matrix connection and start applicable services like monitoring, reviewing voice and events log, establish forwarding and phone patches.

Features & Benefits

Based on the IP protocol
Communication with different telecommunication Channels
Capability of connection to high capacity communication lines.
Establish Connection with Radio and telephony and wireless communication lines.
Flexibility for incorporating controller's needs
Integration for space optimization
Friendliness for handy access to communication equipment
Ergonomics for daily continuous use
Materials for making the workplace as comfortable as possible
Health prevention for avoiding the user to be prone to diseases
Physical dimensions compatible with control tower area
Suitable height with tower windows
Made from synthetic material (iron, aluminum and wood)
Rustproof , anti-humidity , anti-abrasion and tenacious materials
Digital clock Module
Digital clock Module
Different tactical and military vehicle installation possibility

SERVICES:
Guaranteed Warranty
